

How Ionaire deactivates *Virus, Bacteria and Mold*

Viruses such as COVID-19 can spread in 3 ways

Person to Person through direct contact. We cannot help control this spread.

Surface to Person through indirect contact. An infected person can touch a surface and another person touching the same surface can get infected.

Airborne, through expelled droplets. One can also get infected by inhaling microscopic droplets expelled by an infected person coughing or sneezing.

The plasma ions destroy the virus present in the air and on surfaces before it has a chance to infect another person. Ionaire is the indoor air quality solution that actively reduces viruses, bacteria, mold, pollen, smoke, dust and odors *in the space where you breathe*.
